

On October 23, 2007, Dynamic Flowform Corp. was named “Small Contractor of the Year 2007 by the US Army & US Marine Corps. Product Manager for Mortar Systems. The award was given in recognition for Dynamic’s “outstanding efforts to develop lightweight 60mm and 81mm flowform cannon barrels”. Nick Fonte, Production Manager, accepted the award at the 2007 Mortar Conference in Morristown, New Jersey.

Flowforming technology allowed the use of super alloys previously thought to be impractical due to costs associated with preceding manufacturing practices. This new technology enabled the Department of Defense (DoD) in a joint Marine Corps/Army effort to design two new mortar systems which increase the life of the cannons, decrease the cost of production and lighten the load on Marines and Soldiers in combat. In the DoD's continued effort to ease the load on the infantrymen, flowforming 718 Inconel mortar cannon barrels has been a huge success story.
